

FOR IMMEDIATE RELEASE

**The *Palliative Care Formulary 5th edition (PCF5)*
published November 2014**

PCF is a comprehensive compendium containing a wealth of essential therapeutic information about drugs used in palliative and hospice care. It is unequalled in its range and depth of information.

PCF provides the most authoritative guide to off-label indications for drugs used in palliative care, and includes detailed advice about giving multiple drugs by continuous subcutaneous infusion. It is an essential resource for palliative care and hospice specialists, and all who care for patients with end-stage disease. **PCF** is an established resource which continues to receive worldwide acclaim.

Since the publication of **PCF4** in 2011, every drug monograph has been reviewed and updated. Two new chapters cover variability in response to drugs (replaces chapter on Cytochrome P450) and the drug treatment of pruritus. To aid comparison, several sets of drug monographs have been streamlined into single generic monographs, notably Bisphosphonates, Cannabinoids, Haemostatics, LMWH, Opioid antagonists, Psychostimulants.

Although written primarily with cancer patients in mind, **PCF5** contains specific material relating to several other life-limiting diseases e.g. COPD, congestive heart failure, renal failure, and Parkinson's disease. PCF also includes a number of *Quick Prescribing Guides* and *Quick Clinical Guides*.

PCF5 is also available on-line (updated continuously) or as a PDF e-book (updated annually); see website for price options.

**PCF5 is now available for only £50 with free delivery in the UK from
